

Air Conditioning Maintenance Tips For

COOLER WEATHER

As warmer climates like Florida transition into cooler months, ensuring your air conditioning system is well-maintained becomes essential for optimal performance. Proper maintenance not only prevents unexpected breakdowns when the heat returns but also ensures a cool and comfortable environment on unexpectedly hotter days throughout the winter season. Here are some vital maintenance tips to prep your air conditioning for the cooler weather:

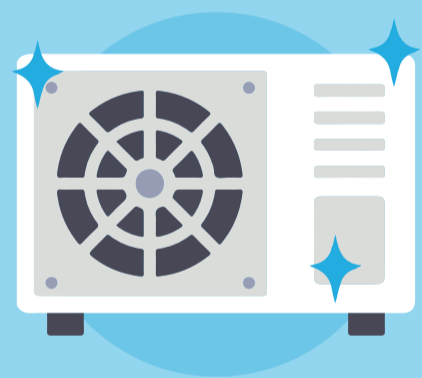

Clean or Replace Air Filters

The air filters in your AC system accumulate dust and debris over time, impacting airflow and efficiency. Regularly cleaning or replacing these filters ensures that your system operates smoothly. It also helps maintain good air quality inside your home.

Check and Clean the Outdoor Unit

Inspect the outdoor unit for any debris or obstructions. Leaves, dirt, or even overgrown vegetation can hinder the unit's performance. Gently clean the unit and ensure there's proper clearance around it for efficient airflow.

Adjust the Thermostat Settings

With changing weather, you might need to modify your thermostat settings. Gradually adjust it to accommodate the cooler weather without overworking the system. Utilizing programmable thermostats can help regulate temperature changes more efficiently.

Schedule Professional Maintenance

Consider having a professional HVAC technician inspect and service your air conditioning system. They can identify any potential issues, clean components thoroughly, and ensure everything is in top working condition for the upcoming season.

For professional assistance and a hassle-free maintenance experience, contact Ellsworth Heating & Cooling by calling **866-281-5199** or visiting www.ellsworthair.com. Ensure your AC is in its best shape by signing up for our **Comfort Club maintenance** program and securing routine maintenance for a consistently cool and comfortable home in North Fort Myers, FL.
